New Multipurpose Breaching Tool

The **Jersey Boot™** is a new patent pending multipurpose breaching tool which was designed out of necessity and extensive field experience; thus, it was made by breachers for breachers. It is made entirely in the USA using nothing but 100% USA steel for its construction. It weighs 24 pounds with no moving parts and comes with a lifetime warranty on the striking head under normal use. It is 26 inches overall in length and allows the operator to complete countless maneuvers in tight quarters.

The operator will no longer have to search for different tools for breaching and/or emergency situations since the **Jersey Boot** has multiple uses: as a traditional ram; as a height differential ram; as a CQB ram; as a fire axe; as a digging tool; for lock and chain busting; for prying action; plus many more uses.
